

Integrations to Fit Your Organization

“The HireTouch™ framework allows the University to leverage existing integrations to both commercial and in-house systems in order to provide real-time synchronization and batch processing of applicant information.”

- University of Illinois

Human Resource Information Systems (HRIS)

HireTouch can work with your HRIS provider to quickly and easily provide an integration between systems, allowing for real-time employee information sharing. The HireTouch development team has extensive experience building both one-way and bi-directional integrations with the HRIS systems most often utilized. As no two institutions are the same, every integration is custom built to meet the specific needs of each institution.

Single Sign-On

HireTouch supports Single Sign-On Authentication. The system also supports embedded links with no log-in required when utilizing the client's network. Log-in would always be required when accessing from a public computer. The following methods are currently supported:

- Central Authentication Service (CAS)
- Active Directory Federation Services (ADFS)
- Lightweight Directory Access Protocol (LDAP)
- Security Assertion Markup Language 2.0 (SAML)

Background Screening

HireTouch partners with many background check providers, including Verified Credentials, Inc., Careerbuilder Employment Screening, PreTrax and Accurate Background. HireTouch can also seamlessly integrate with your existing provider, allowing you to perform a wide variety of background checks. Administrators can easily select and order background checks, including educational, employment history and criminal records. Monitor the status of each report and receive notifications when the results are returned. The resulting report is electronically filed in the applicant's online profile for easy viewing and retrieval.

Integrate with LinkedIn, Vitae & Sovren

Applicants are able to create a new HireTouch account or connect an existing account to a LinkedIn or Vitae profile. It allows applicants to populate areas of their application with information found on their profile, as well as the ability to sign in to HireTouch using LinkedIn or Vitae credentials. HireTouch also integrates with Sovren Resume Parser, allowing applicants to accurately populate application fields easily by uploading their resume.

Custom Career Portal

Preserving your brand identity is a key benefit of HireTouch's custom career portal, which allows you to keep a consistent look and feel throughout the entire applicant experience. Integrating seamlessly with your current website, the HireTouch career portal can be configured to match colors, logos, and themes to match your organization's current branding.

Job Boards

In partnering with JobTarget, HireTouch offers integration to one of the world's leading career sites. This integration allows your company to post job announcements to multiple job boards at once, giving you a larger applicant pool to choose the most qualified person for the position. HireTouch also allows you to quickly and easily post jobs to popular social media sites such as Facebook, LinkedIn, Twitter and Google+.
